

Statement of Certification Residential Homeowner

Homeowners can receive a 10% tax credit of the product cost with a maximum deduction of \$500. Installation fees are not included. In order to qualify for tax credits, the Natural Light Tubular Skylight products must have been placed in service on January 1, 2011 through December 31, 2013 and must meet the ENERGY STAR® requirements for U-Factor and Solar Heat Gain Coefficient (SHGC). In addition, the products must have been properly installed meeting all applicable building, electrical and fire codes.

To claim a tax credit, this Statement of Certification is not required to be filed with the tax forms, but income tax regulations require taxpayers to have appropriate documentation to qualify for a tax credit. Please complete the form below and keep it with your tax records.

Statement:

Natural Light Energy Systems certifies that the:

10" TUBULAR SKYLIGHT
13" TUBULAR SKYLIGHT
18" TUBULAR SKYLIGHT

qualify for 10% Federal Tax Credits (with a maximum deduction of \$500) as defined in the **American Taxpayer Relief Act of 2012** if installed from January 1, 2011 - December 31, 2013.

Disclaimer: This Statement of Certification was prepared on January 1, 2013 in accordance to the qualifications for tax credits as the law states on this date. Natural Light Energy Systems cannot guarantee the products eligibility if the current requirements or laws change after 12/31/13. Natural Light recommends consulting a tax professional if considering filing for a tax credit. More information about tax rebates is available from the IRS. Natural Light Energy Systems is not responsible or liable for a taxpayers ability to receive tax credits.

Natural Light Self-Flashing Aluminum Tubular Skylight Energy Performance Ratings:

U-Factor (U.S./I-P)

0.54

Solar Heat Gain Coefficient

0.23

U-Factor measures the rate of heat transfer and tells you how well the skylight insulates. U-factor values generally range from 0.20 to 1.25 and are measured in Btu/h-ft²·°F. The lower the U-factor, the better the window insulates.

Solar Heat Gain Coefficient (SHGC) measures the fraction of solar energy transmitted and tells you how well the product blocks heat caused by sunlight. SHGC is measured on a scale of 0 to 1; values typically range from 0.20 to 0.80. The lower the SHGC, the less solar heat the skylight transmits.
